

The image shows a screenshot of an Ubuntu desktop environment. A terminal window titled "hozon.sh (~) - gedit" is open, displaying a shell script. The script contains commands for setting a timestamp, creating a directory, changing to that directory, and using wget to download content from three different URLs. The terminal window has a toolbar with icons for opening, saving, printing, and navigating. The status bar at the bottom indicates the shell is "sh", the tab width is 8, and the cursor is at (9 rows, 6 columns). A yellow tooltip at the bottom right states "hozon.sh" was selected (301 bytes).

```
now=`date +%m%d%H%M%S`;  
mkdir $now  
cd $now  
  
wget -r -l 3 http://camp-fire.jp/projects/fresh  
wget -r -l 3 https://www.makuake.com/discover/index/1/all/open/new/  
wget -r -l 3 https://readyfor.jp/projects?  
sort_query=desc_published_at&successful_sort_query=successful_desc_published_at  
cd ~/
```
